Progression Infonet 11/2023 – 12/2025

Associate SAP Basis Delhi NCR

- Managed technical aspects of SAP system, ensuring smooth functioning and optimal performance.
- Handled system analysis, monitoring, upgrades, and authorization management.
- Managed user administration and overall SAP Administration tasks.

Roles And Responsibilities

SAP Application

- Performed regular SAP system health and performance monitoring of SAP systems, file systems, and background jobs to ensure smooth operations
- Perform kernel patch upgrades and SPAM/SAINT version upgrades to keep the landscape up to date.
- Activate and assign services via T-codes (SICF, SMICM, etc.) as per client requirements.
- Schedule and monitor background jobs.
- Renewed and installed SSL client certificates using T-code STRUST as part of system security.
- Manage user accounts, including creating, deleting, and maintaining credentials, performing password resets, and locking/unlocking users to ensure secure access to SAP systems.
- Manage user roles, T-codes, and authorizations to control access to SAP systems

- SAP, data files and cofiles are used to manually move transport requests between unlinked systems using OS level and T-code CG3Z (for uploading) and CG3Y (for downloading)
- Implement SAP Notes (SNOTE) and create transport requests (TR) in DEV, moving them to QAS and PRD according to the requirements.
- Managed client copy activities, created new clients and performed post-copy setup activities.
- Troubleshoot and resolve SAP application performance issues.
- Analyze system logs and performance using SMLG, SM37, ST06, and SM50.
- Analyze ABAP dumps and system logs to identify and resolve errors.
- Coordinated with functional, ABAP, and OS teams to resolve issues efficiently
- Performed client refresh from Production (PRD) to Quality (QAS) client to support testing and validation.
- Performed System Refresh from Production (PRD) to Quality (QAS) and restore the DB.

HANA Database

- Conduct regular HANA DB health checks and replication monitoring to ensure system stability and resolve issues proactively.
- Troubleshoot system-related issues and monitor CPU/memory utilization on SAP application and database servers.
- Perform storage analysis, cleanup, and reclaim space in SAP HANA directories (/hana/Shared and /hana/log).
- Restarted databases and tenant databases as required.
- Monitored and managed SAP HANA database activities using HANA Studio.
- Performed SAP HANA database upgrade before maintenance end-of-support, coordinating with client and implementing recommended upgrade strategy.
- Performed SAP HANA database installation as per customer requirements, following SAP best practices and project standards.
- Performed SAP HANA tenant database restore using complete data backups and log backups as per customer requirements.
